

459B.305 Dry bedded manure control — water quality.

A dry bedded confinement feeding operation shall retain all dry bedded manure produced by the operation between periods of dry bedded manure application. For purposes of [this section](#), dry bedded manure may be retained by stockpiling as provided in [this chapter](#). A dry bedded confinement feeding operation shall not discharge dry bedded manure directly into water of the state or into a tile line that discharges directly into water of the state.
